THE PRESIDENT'S MESSAGE

We faced many challenges over the course of 2021. The long-drawn-out Covid-19 pandemic demanded intense efforts of the entire Brazilian beef industry in order to strengthen controls and to ensure the quality and safety of its products. The good news is that, fortunately, when observing the industry figures we can identify that – once again – the business has complied with its mission and can demonstrate its standing as a leading player in the world market, with yet another record in export revenues.

In 2021, consignments of Brazilian beef came to US\$ 9.2 billion, up 8.4% over 2020. Taking only fresh beef into consideration, which accounts for over 80% of the volume exported in 2021, the negotiated amounts also attained a record of US\$ 5,170 per tonne, an 18.2% increase over 2020. This growth in the average price is the result of an important integration effort uniting the government and the private sector during the pandemic. First of all, we ensured the safety of the employees, which enabled us to continue to work in order to meet the market needs with quality.

Since the beginning of the pandemic, the industry adopted all the international protocols for control and prevention, with the precautions and transparency that are the trademarks of Brazilian beef. All the challenges that have been overcome in recent years give us the confidence to reaffirm our commitment to supplying food, with quality and safety, to the

Brazilian population and to the hundreds of countries to which we export our beef.

Furthermore, the results reinforce the projections that, in 2022, Brazilian beef exports will break a new record by attaining two-digit revenue for the first time ever. Among factors that will likely contribute to this scenario are the resumption of purchasing by China, the prospects of opening new markets in 2022 such as Canada (while others are under negotiation, for example Japan and South Korea), in addition to the restoration of the approval of plants to export beef to Russia.

This is ABIEC's commitment, aligned with the interests of its member companies, who together account for 97% of the Brazilian beef traded on the international market, striving to expand exports by reducing trade barriers and promoting Brazilian beef worldwide as an affordable, top-quality and sustainably raised product.

These concepts underpin this report, in which we present the most important data portraying the profile of Brazil's livestock farming sector in 2021.

Antonio Jorge Camardelli

President of the Association of Brazilian Beef Exporters (ABIEC)

QUANTIFICATION OF THE LIVESTOCK CHAIN

The beef industry was accrued at worth **R\$ 913.14 billion** in 2021. This amount includes all business and movements related to the industry, from amounts spent on the inputs used in livestock raising, to investments in genetics, animal health, nutrition, exports and sales in the domestic market.

Find below all the details on these figures in addition to the history that shows the entire evolution of the GDP of Brazilian livestock production.

Graph 1 Brazilian Herd (cattle) - million heads

* Preliminar

Source: Athenagro, dados IBGE (Censo, PPM, PPT), elaboração Abiec

LIVESTOCK IN BRAZIL

In 2021, the Brazilian herd was estimated in 196.47 million head, of which 39.14 million head were slaughtered. The volume of beef produced was 9.71 million tonnes CWE. Of this total, 25.51% or 2.48 million CWE were exported, whereas 7.24 million

CWE, equivalent to 74.49%, remained in the domestic market.

See below for further data on the evolution of herds per State, and other data on the performance of Brazilian livestock production.

Methodology

Up until the 2020 edition, the number of head of cattle in Brazil's herd was published in accordance with the Municipal Livestock Survey produced by Brazil's official statistical agency IBGE (the Brazilian Institute of Geography and Statistics). The behavior of the market from 2019 to 2021 proved that it is not feasible for there to be a herd above 215 million head in the territory of Brazil, a situation often discussed by livestock experts. Brazil's official data and those of several other studies carried out by private enterprise underpin an increasing acceptance that Brazil's herd should be closer to 175 to 180 million head, rising to 190 million in certain months of the year.

Therefore, beginning with the 2021 edition, Brazil's herd will be presented in accordance with the following methodology, as suggested by Athenagro Consultoria. Baseline herd, 2017 census, varying by head per municipality based on the IBGE Municipal Livestock Survey, also taking into account 50% of the total number slaughtered in the inspected market (federal, state-level and municipal inspection systems), obtained by IBGE's Quarterly Livestock Survey.

Table 17 Historic data and projection for livestock until 2031

In the most conservative scenario, Brazilian beef exports will exceed three million tonnes between 2025 and 2030. In order to make sure that this meets the needs of internal and external markets, beef production will need to increase by 35% between 2020 and 2030. This increase will only be possible with a 45% increase in the average productivity of Brazilian livestock.
